LETTER OF TRANSMITTAL.

U. S. Department of Agriculture,
Bureau of Statistics,
Washington, D. C., June 28, 1910.

Sir: I have the honor to submit for publication a set of charts, prepared by Mr. Middleton Smith, which show graphically the production of the principal crops and the number of live stock in the United States, by States, in the decades 1899–1908 and 1869–1878, and like data for the principal countries of the world in specified periods. Graphic representations are also included for the United States of other crops in various years, of population engaged in agricultural pursuits and in all pursuits, value of all farm products; value of farm land, buildings, and implements; and acreage of farm land.

The preparation of these charts has been suggested by frequent requests for the data herein graphically illustrated.

It is recommended that the graphics be published as Bulletin 78 of this Bureau.

Very respectfully,

Victor H. Olmsted,
Chief of Bureau.

Hon. James Wilson,
Secretary of Agriculture.

AGRICULTURAL GRAPHICS.

INTRODUCTION.

Statistics in graphic form are universal in their appeal, and unvarying in their impressiveness, whereas in these respects mere figures sometimes fail. Data in this form accompanied by figures make a lasting impression. In this Bulletin both graphics and figures are shown, so that if the eye fails to detect differences in the former, when the differences are small, the figures will assist. The graphics on the maps herein presented represent the known agricultural production in the different States of the United States and in certain countries of the world, in proportion to the total production of the United States and of those countries. Special stress, however, should be laid upon the fact that the data given do not represent the total agricultural production of the world, but only of all countries for which official or other statistics are extant.

The graphics include 88 maps, 62 of which are United States maps and 26 are maps of the world. The scale upon which the graphics are drawn is not in all cases uniform, because of the great difference in both production of crops and size of the subdivisions in the maps. No attempt at accuracy has been made in outlining the boundaries of foreign countries, the purpose of the maps being graphical and not geographical. The graphic illustrations of production in decades thirty years apart show the extent of shifting in production between the decades. The averages of ten years' production are used, so far as data are available, in preference to that in a single year which, by chance, may be one of high or low yield, and therefore not fully representative. Excepting in census years the graphics are based on estimates, official ones whenever obtainable.

Although the data upon which the graphics are based do not include statistics of years later than 1908, and in some cases not later than 1900, it is believed that the inclusion of later years would not materially affect the showing of the relative distribution of production of the crops illustrated.

The live-stock graphics in the world map are not based on statistics for a given year or on averages for series of years; they are for various odd years within a decade, when official enumeration or commercial estimates chance to be obtainable.

The graphics shown in the Union of South Africa embrace the Cape of Good Hope, Natal, Transvaal, and Orange Free State, the four colonies which were federated under the above name June 1, 1910.
